Engineering & Operations

Using one of our Engineering & Operations solutions enables your organization to leverage various data throughout your most important maintenance and operational processes, enabling major increases in Hands on Tool Time, improving the quality of work, reducing risk, bolstering situational awareness and streamlining procedures.

“Enablon’s Control of Work Software achieves 83% of the maximum potential score, making it the strongest software for the full breadth of control of work functionality.”

Challenges

Conquering Industry Challenges

Everyday companies encounter the risks of workplace injuries, property damage, reputational harm, which leads to different systems that record data on incidents. This creates data silos that prevent a global, standard and consistent approach to occupational safety and health. It also prevents the sharing of best practices, reduces opportunities for collaboration, and makes it difficult to promote a uniform safety culture across the organization.

Responsible, Productive and Safe

The most effective way of realizing and ensuring proper process compliance, increased safety, productivity and overall workforce efficiency, is transitioning to an integrated, digital Engineering & Operations solution. Using a digital solution allows users to more easily access and share information with necessary stakeholders, as well as to continually be aware of changes.

EHSQ & Sustainability

Risk & Compliance

Benefits

Unprecedented safety, efficiency and productivity. Reduce the risk of accidents and incidents, prevent unplanned shutdowns and shorten your turnarounds. Increase your Hands on Tool Time, plant uptime, experience cost savings and increase in profitability.

Multi-industry best practices through a single, integrated platform that is easily configurable and suitable for capital intensive and hazardous industries.

Ecosystem-connected. Interface the software with numerous external systems, including MMS, DMS and DCS.

Create a fully digital plant with our Control of Work, Process Safety, Field Operations or Barrier Management solutions.

Innovation tailored to your needs. Our suite of solutions provides you the opportunity to move into the digital future with innovative, fit-for-purpose tools.

Monitor your assets through real-time graphical overviews with integrated conflict detection.

Easy to use from front line to management with an interface and workflows build for optimal adoption. Available on desktop, tablet or mobile.

The Enablon Difference

Enablon, a Wolters Kluwer business, is the world's leading provider of integrated risk management, operational risk management, EHS and sustainability software solutions. Around the world, hundreds of large companies and millions of users use our software applications to make their organization safer, more responsible and productive.
